Biological Warp-Metric in SEFI

Jason Dutton

Overview

Biological warp-metrics extend the SEFI metric to living systems, encoding aging, healing, and identity continuity in geometric form.

Biological Metric Definition

$$g_{\mu\nu}^{(bio)} = g_{\mu\nu} + \Theta_{\mu\nu}$$

Where:

- $g_{\mu\nu}$ = base SEFI metric
- $\Theta_{\mu\nu}$ = biological curvature tensor

Aging and Healing

Aging is modeled as manifold fatigue; healing is modeled as metric restoration toward a lower-fatigue configuration.

Interpretation

Biological warp-metrics allow SEFI to describe life processes as geometric transformations of curvature and resonance.
