# SEFI Curvature Operators

Jason Dutton

## Overview

Curvature operators in SEFI act on metric and field components to describe electron-induced and biological geometric behavior.

## Primary Curvature Operator

$$\hat{C} = \nabla^2 + k^2$$

## Electron Curvature Operator

$$\hat{C}_e = \omega_c^2 \, \partial_t^2$$

## Biological Curvature Operator

$$\hat{C}_b = \gamma \, \partial_i \partial_j g^{ij}$$

## Interpretation

These operators define how curvature evolves under electron frequency, spatial gradients, and biological manifold structure.
