SEFI Gradient-Flow Operators

Jason Dutton

Overview

Gradient-flow operators in SEFI describe directed flows of curvature and resonance, particularly in neural and identity-related structures.

Neural Gradient-Flow Operator

$$\hat{G}_{neuro} = -\nabla\Phi + \partial_t\Psi$$

Consciousness Gradient-Flow

$$\hat{G}_{id} = \partial_\tau g_{\mu\nu}$$

Interpretation

These operators encode how curvature and resonance propagate through neural and identity manifolds over time.
