# Healing and Metric Restoration in SEFI

Jason Dutton

## Overview

Healing in SEFI is defined as the restoration of the metric toward a lower fatigue, higher-coherence configuration.

## Healing Operator

$$\hat{H} = -\partial_t \Phi + \nabla^2 \Psi$$

## Restoration Condition

$$\hat{H} g_{\mu\nu} = 0$$

## Interpretation

Metric restoration corresponds to a balance between static curvature reduction and dynamic resonance support, driving healing in the manifold.
