SEFI vs General Relativity: Curvature Comparison

Jason Dutton

Overview

This document compares curvature origins in SEFI and General Relativity (GR).

SEFI Curvature

In SEFI, curvature arises from electron waveform geometry:

$$R_{\mu\nu}^{SEFI} \propto \omega_c^2$$

GR Curvature

In GR, curvature arises from mass-energy density:

$$R_{\mu\nu}^{GR} \propto T_{\mu\nu}$$

Interpretation

SEFI reframes curvature as a function of electron frequency and waveform structure, while GR uses bulk mass-energy as the source.
